

3. General price calculation

1. Conversion from price per hundred weight (cwt) to price per thousand square feet (msf)

Formula	$\frac{\$/\text{cwt} \times \text{lb./msf}}{100} = \$/\text{msf}$
Example	$49.00/\text{cwt} - 41.0 \text{ lb./msf}, 10 \text{ pt. C1S Plus}$ $\frac{\$49.00 \times 41}{100} = \$20.09/\text{msf}$

2. Conversion from price per hundred weight (cwt) to price per thousand sheets (\$/M Sheets)

Formula	$\frac{\$/\text{cwt} \times \text{M weight}}{100} = \$/\text{M sheets}$
Example	$\$47.00/\text{cwt} - 472 \text{ M weight}$ $\frac{\$47.00 \times 472}{100} = \$221.84/\text{M sheet}$
